

Customer Shopping Behavior Analysis

1. Project Overview

This project analyzes customer shopping behavior using transactional data from 3,900 purchases across various product categories. The goal is to uncover insights into spending patterns, customer segments, product preferences, and subscription behavior to guide strategic business decisions.

2. Dataset Summary

- Rows: 3,900
- Columns: 18
- Key Features:
 - Customer demographics (Age, Gender, Location, Subscription Status)
 - Purchase details (Item Purchased, Category, Purchase Amount, Season, Size, Color)
 - Shopping behavior (Discount Applied, Promo Code Used, Previous Purchases, Frequency of Purchases, Review Rating, Shipping Type)
- Missing Data: 37 values in Review Rating column

3. Exploratory Data Analysis using Python

We began with data preparation and cleaning in Python:

- **Data Loading:** Imported the dataset using pandas.
- **Initial Exploration:** Used `df.info()` to check structure and `.describe()` for summary statistics.

	Customer ID	Age	Gender	Item Purchased	Category	Purchase Amount (USD)	Location	Size	Color	Season	Review Rating	Subscription Status	Shipping Type	Discount Applied

NaN	NaN	38.000000	NaN	NaN
NaN	NaN	50.000000	NaN	NaN

- Missing Data Handling:** Checked for null values and imputed missing values in the Review Rating column using the median rating of each product category.
- Column Standardization:** Renamed columns to **snake case** for better readability and documentation.
- Feature Engineering:**
 - Created **age_group** column by binning customer ages.
 - Created **purchase_frequency_days** column from purchase data.
- Data Consistency Check:** Verified if discount_applied and promo_code_used

were redundant; dropped promo_code_used.

- **Database Integration:** Connected Python script to PostgreSQL and loaded the cleaned DataFrame into the database for SQL analysis.

4. Data Analysis using SQL (Business Transactions)

We performed structured analysis in PostgreSQL to answer key business questions:

1. **Revenue by Gender** – Compared total revenue generated by male vs. female customers.

The screenshot shows a database interface with tabs for 'Data Output', 'Messages', and 'Notifications'. Below the tabs is a toolbar with icons for adding, deleting, and saving data. The main area displays a table with two columns: 'gender' (text) and 'revenue' (numeric). The table contains two rows: 'Female' with revenue 75191 and 'Male' with revenue 157890.

	gender text	revenue numeric
1	Female	75191
2	Male	157890

2. **High-Spending Discount Users** – Identified customers who used discounts but still spent above the average purchase amount.

The screenshot shows a database interface with tabs for 'Data Output', 'Messages', and 'Notifications'. Below the tabs is a toolbar with icons for adding, deleting, and saving data, and an 'SQL' button. The main area displays a table with two columns: 'Customer ID' (bigint) and 'Purchase Amount (USD)' (bigint). The table contains 21 rows of data. At the bottom, a status bar indicates 'Total rows: 839' and 'Query complete 00:00:00.103'.

	Customer ID bigint	Purchase Amount (USD) bigint
1	2	64
2	3	73
3	4	90
4	7	85
5	9	97
6	12	68
7	13	72
8	16	81
9	20	90
10	22	62
11	24	88
12	29	94
13	32	79
14	33	67
15	35	91
16	37	69
17	40	60
18	41	76
19	43	100
20	44	69
21	55	94

Total rows: 839 Query complete 00:00:00.103

3. **Top 5 Products by Rating** – Found products with the highest average review ratings.

	item_purchased text	Average Product Rating numeric
1	Gloves	3.86
2	Sandals	3.84
3	Boots	3.82
4	Hat	3.80
5	Skirt	3.78

4. **Shipping Type Comparison** – Compared average purchase amounts between Standard and Express shipping.

Data Output

Notifications

SQL

Showing rows: 1 to 2

Page No: 1

	Shipping Type text	avg_purchse numeric
1	Standard	58.46
2	Express	60.48

5. **Subscribers vs. Non-Subscribers** – Compared average spend and total revenue across subscription status.

Data Output

Messages

Notifications

6. **Discount-Dependent Products** – Identified 5 products with the highest percentage of discounted purchases.

	item_purchased text	discount_rate numeric
1	Hat	50.00
2	Sneakers	49.66
3	Coat	49.07
4	Sweater	48.17
5	Pants	47.37

7. **Customer Segmentation** – Classified customers into New, Returning, and

	customer_segment text	Number of Customers bigint
1	Loyal	3116
2	New	83
3	Returning	701

Loyal segments based on purchase history.

8. **Top 3 Products per Category** – Listed the most purchased products within each category.

	item_rank bigint	category text	item_purchased text	total_orders bigint
1	1	Accessories	Jewelry	171
2	2	Accessories	Sunglasses	161
3	3	Accessories	Belt	161
4	1	Clothing	Blouse	171
5	2	Clothing	Pants	171
6	3	Clothing	Shirt	169
7	1	Footwear	Sandals	160
8	2	Footwear	Shoes	150
9	3	Footwear	Sneakers	145
10	1	Outerwear	Jacket	163
11	2	Outerwear	Coat	161

9. **Repeat Buyers & Subscriptions** – Checked whether customers with >5 purchases are more likely to subscribe.

	subscription_status text	repeat_buyers bigint
1	No	2518
2	Yes	958

a.

10. **Revenue by Age Group** – Calculated total revenue contribution of each age group.

	age_group	total_revenue
	text	numeric
1	56+	65256
2	46-55	45619
3	26-35	44342
4	36-45	43234
5	18-25	34630

5. Dashboard in Power BI

Finally, we built an interactive dashboard in **Power BI** to present insights visually.

Customer Behavior Dashboard

Customer Behavior Dashboard

6. Business Recommendations

- **Boost Subscriptions** – Promote exclusive benefits for subscribers.
- **Customer Loyalty Programs** – Reward repeat buyers to move them into the “Loyal” segment.
- **Review Discount Policy** – Balance sales boosts with margin control.
- **Product Positioning** – Highlight top-rated and best-selling products in campaigns.
- **Targeted Marketing** – Focus efforts on high-revenue age groups and express-shipping user
